DETAILED ACTION

1. The applicant's representative called on 12/15/06 to inform the examiner that claim 12, which had been cancelled, had been mistakenly listed as allowed on the Notice of Allowance. Therefore, this Supplemental Notice of Allowance corrects that issue.

Allowable Subject Matter

2. Claims 1, 3, 5, 7-11, 13, 15-20 and 23-25 are allowed.

The following is an examiner's statement of reasons for allowance:

In regard to claims 1, 3, 5, 7-11, 15, 17, 19, 23, and 25, the prior art does not disclose a photographing operation control device with the combination of limitations specified in the claimed invention, specifically the limitations of:

a photographing mode selecting processor that selects one of said blank photographing mode and said normal photographing mode, said photographing mode selecting processor being able to select said blank photographing mode when said recording medium sensing processor and said blank recording area sensing processor sense that the recording medium having the blank recording area is installed in said device,

wherein said blank photographing operation performing processor performs said photographing operation in said blank photographing mode when said recording medium sensing processor senses that said recording medium is not mounted: and

wherein the volatile buffer memory is configured such that, in the blank photographing mode, image data in the volatile buffer memory is overwritten with the subsequent image data without previously, having been transferred to the recording medium, as claimed in claim 1.

In regard to claims 13, 16, 18, 20 and 24, the prior art does not disclose a photographing operation control device with the combination of limitations specified in the claimed invention, specifically the limitations of:

a photographing mode set switch for switching a photographing operation between a normal photographing mode and a blank photographing mode,

wherein when said photographing operation is set to said blank photographing mode and an image is photographed, said system controller stores image data in said buffer memory and does not automatically transfer said image data to a recording medium,

wherein when a recording medium is not installed in said electronic still camera, said system controller automatically sets said photographing operation to said blank photographing mode, and

when a recording medium is installed but does not include a blank recording area sufficient to store image data, said system controller automatically sets said photographing operation to said blank photographing mode; and

wherein the volatile buffer memory is configured such that, in the blank photographing mode, image data in the volatile buffer memory is overwritten with the

subsequent image data without previously having been transferred to the recording medium, as stated in claim 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
